

Techmo

Techmo is a spin-off of AGH University of Science and Technology in Kraków, Poland. The company implements solutions in the fields of audio, speech and language technologies. It was formed by qualified specialists who were involved in multiple projects. Techmo focuses mainly on developing and popularising voice control for electronic devices. Currently, the company is involved in development of back-end technology for IVR solutions. Techmo offers two internships in Kraków.

C++ developer

We are looking for engineers who want to join our team developing a modern speech recognition system. If you are not afraid of challenges, a large amount of data and you want to learn computers to understand better than people, have a knack for solving problems, Techmo is for YOU!

Your tasks will include:

- development of systems for automatic speech recognition
- design and implementation of algorithms for Machine Learning

Requirements:

- good knowledge of C ++
- knowledge of scripting languages Python / Ruby
- the ability to create an efficient and manageable code
- the ability to operate in a Linux environment

It is great, if you:

- have experience with Machine Learning / Speech Recognition
- used the framework Kaldi / HTK
- can optimize the performance of created applications

Recruitment process:
